## Skills

### 🔗 Programming Languages

C/C++, Python, Rust, C#, Java, JavaScript, SQL

### 🔗 Game Development Engines

Unreal Engine, Unity, Godot

### 🔗 Game Development Tools

Maya, Blender, 3ds Max, Wwise, FMOD, Cascadeur

### 🔗 Graphics Programming

Vulkan, Direct3D, OpenGL, GLSL/HLSL

### 🔗 Database Management

MySQL, PostgreSQL

### 🔗 Cloud Computing

AWS, Google Cloud, Docker Build Cloud

### 🔗 Version Control and CI/CD

Git, Perforce, Jenkins

### 🔗 Project Management

JIRA, Confluence, Trello, Agile/Scrum/Waterfall

## Certifications

### Udemy Certifications

- Unreal Engine C++ Game Development
- Advanced C# Scripting in Unity
- Advanced C++ Programming
- Shader Development for Unity with Cg
- Vulkan API with C++

### Coursera Certifications

- Game Engine Architecture
- Game Design Patterns
- Chernobyl - Game Engine Development Series
- Chernobyl - OpenGL Rendering Series

## Summary

Software engineer and game developer with 5 years of professional experience developing gameplay/simulation features, animation systems, tech-art pipelines, and designer tools for large, AAA video game franchises.

## Education

### Boise State University

Computer Science

Bachelor of Science

Boise, ID • 2017 - 2021

## Experience

### Electronic Arts

Software Engineer

Seattle, WA

2021 - Present

Prototyped several navigation and simulation features in Unreal/C++ at Maxis, the studio behind the Sims franchise. Architected a motion-matching-based animation/locomotion system while working with key designers and animators. Implemented several animation development tools in Maya/Python, including a machine-learning-based animation pose-matching library/generator. Worked closely with key development directors and designers to rapidly iterate on game prototypes to "find the fun".

### Lionbridge

Senior Games Test Engineer

Boise, ID

2020 - 2021

Worked as a QA tester at Lionbridge, an outsourced functional and localization testing firm for video games. Created well-documented bug reports through a combination of combinatorial, tree, regression, and ad hoc testing methodologies. Provided additional insight on existing bug reports using previous knowledge of engine and gameplay programming.

### TurnUp

Software Engineer Intern

Remote

2020

Interned as a team lead for the development of TurnUp, a web/mobile app for a youth activism organization and networking. Developed cross-platform API for application features in React Native and Express.js. Handled pull requests, code reviews, and unit testing for the intern team's feature implementations.

### Boise State University - Department of Computer Science

Undergraduate Research Assistant

Boise, ID

2020

Developed a distributed content production pipeline intended for Boise State University's "World Museum" project. Researched and implemented computer imaging processing and compression algorithms to develop web-based digital asset management software. Designed and implemented database schemas for the asset tagging system.

### Boise State University - Department of Computer Science

Learning Assistant

Boise, ID

2019-2020

Assisted in courses on object-oriented design principles, test-driven development, and elementary data structures. Held tutoring sessions to assist students in designing and debugging Java programming projects. Refactored auto-grading system for new online summer curriculum
